

Dear valued customer,

Notice of an impeded Supply Chain as a direct effect of the global pandemic Covid-19 and governmental responses to it.

The spread of the virus has had and is continuing to have a large impact globally and many countries have implemented strict health and safety measures. This has so far been something that we have been able to work around in our Supply Chain together with our suppliers and partners.

The notification on Saturday 21st of March that Italy is closing all non-essential business together with increased insecurity on what we can expect from other countries make it extremely difficult to foresee potential Supply Chain problems.

JENS S. is committed to and always work for continuity and predictability in our Supply Chain to serve our customers' requirements.

As a precaution we have already extended our safety stock for standard components and we have our own workshops open to assist with machining and manufacturing.

We will continue to work closely with you, our customers, to give you the best possible support in this situation. Close communication, and transparency on lead times and availability will ensure that we together can minimize the effects this pandemic may have on our business relationship.

Thank you for your understanding.

Kind Regards,
